

Developing new ways of delivering healthcare

The NHS locally has been chosen to be a national Test Bed site. This means GPs, hospitals, care homes and others are working together with technology companies to see how we can deliver care differently using new technologies. The local programme is called the Perfect Patient Pathway and in the first instance is supporting patients with Long Term Conditions.

If you are interested in finding out more about the Perfect Patient Pathway Test Bed visit: www.ppptestbed.nhs.uk or contact: Testbed@sth.nhs.uk

Humetrix, one of the technology companies taking part in the Test Bed programme, has developed the SOS UK app which is offered at no charge to patients. You can find more information about the SOS UK app on the reverse of this flyer. With the app you are able to record information about any medications you may be on, and other health information which may be useful for you to share in an emergency.

Please note:

- The app does not automatically link to any health organisations
- There is no requirement on health professionals to review information you have entered into your SOS UK app
- Upon entering your personal and medical information into the app it will provide you with details about the access that others, medical and non-medical, may be able to gain to the information you enter, so please ensure you read and fully understand this information before entering your information
- Humetrix does not make use or sell any information input into the app. For more information please see the privacy policy: www.sosapp.uk/privacy.html

SOSUK

Peace of Mind in an Emergency

- ✓ FREE app being evaluated by NHS South Yorkshire and Bassetlaw Test Bed Programme
- ✓ Gives Care professionals immediate access to your own key medical information and alerts emergency contacts where you are
- ✓ Provides peace of mind

HOW IT WORKS:

1

Download the free SOS UK app onto your smartphone

2

Create your emergency health record, showing allergies, medications or long-term conditions

3

This creates a unique, printable QR code to use as your lock screen or wallpaper

4

Emergency responders can see your key medical information by scanning this QR code

5

Your emergency contacts will be notified by email exactly where you are
